(54) VARIABLE FOCUS LENS

(57)Abstract:

PROBLEM TO BE SOLVED: To change an optical path passing through two kinds of fluids and to vary a focus, etc., by enclosing two kinds of fluids having characteristics of sensing an electrical field and not sensing the electrical field in a transparent container, and applying the electrical field on them from outside and inclining the density distribution of each fluid.

SOLUTION: The electrical field sensitive fluid (2) and the electrical field anti-sensitive fluid (3) are packed inside the lens body (1). The electrical field is applied on them from outside by a power source (6) through an electrode (4) and an electrode (5). Then, the inclination is generated in the density distribution of both fluids.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's
decision of rejection]

[Date of requesting appeal against
examiner's decision of rejection]

[Date of extinction of right]
